Welcome

We are pleased to welcome you at our company!

This welcoming brochure is handed over to every new out-sourced employee and is meant to give you knowledge about the way the company works, with regards to safety, health and environment (VGM in Dutch).

A foreman of the workshop will go through this brochure with you and will give you a tour in the workplace for the purpose of safety- and health aspects.

For any additional information during your employment, you can turn to the internal safety advisor or the foremen.

MEGA has two divisions; one in repair of refrigerated containers (reefers) and one in container modifications (Container Concepts). Container Concepts' workshop is located at Treurenborg 9.

The repair of the reefers has two locations; one at rightbank (Treurenborg 7) – workshop is called "MEGA 3", and one at leftbank (Kruipin 3A) – workshop is called "MEGA LB".

Safety in the workshops is our priority. Therefore we ask you to read this welcoming brochure attentively. This brochure contains all risks and precautionary measures so that the safety of yourself, but also of your colleagues, is guaranteed during the entire duration of employment.

A trained employee will be appointed to guide you through this process. If you have any questions or remarks, you can always contact the health and safety officer. May we ask you to always report any dangerous situation immediately? That way we can act quickly and take immediate action!

Your safety is our priority!

We wish you a pleasant working period at MEGA!

1. CONTAINER CONCEPTS

1.1 Presence of:

Empty Container Handlers (ECH)
Forklifts
External suppliers
Persons moving on foot

- ➔ Always use the walkway when entering the yard!
- ➔ When crossing ECH-machines / forklifts / lorries, it is of utmost importance to make eye-contact with the driver! Risk at collision!
- ➔ Always wear your chest lamp & fluorescent gear when you enter the yard!

1.2 Location

The location of Container Concepts is Treurenborg 9.

There are two assembly points: one at the parking lot in front of the tower building and one on the other side of the workshop – near the gasstation.

1.3 Emergencies & accidents

If an incident occurs, please proceed to the nearest assembly-point. An evacuation officer will then check whether everyone is present. You cannot leave the assembly-point without registration and permission from the evacuation officer.

In case of emergency, please contact one of the foremen or call the emergency number: **112**.

When an accident occurs, please keep calm and turn to one of the foremen. He/she will administer first aid to the victim. The first aid is located in the office of the foreman. The number of the SIHWA (ambulance of the Port) is 03 / 541. 00. 23. When you call an ambulance, provide the following information:

- Company name (MEGA) → please make sure to state the name of your out-sourcing company at the hospital. Do not use MEGA as you are not employed by MEGA directly!
- Location accident (TREURENBORG 9)
- Name of victim
- Age of victim
- Conditions of the accident
- Severity of the injuries

Immediately contact the health and safety officer: Emily Meers (0032489113337) or Joyce Van Geffen (0032 492 11 24 47).

A minor accident at work, without lost time from work, must be entered in the first aid register. In this case, the health and safety officer also needs to be contacted.

When you witness an **accident**:

- Immediately call your supervisor/foreman
- Do not let the victim drink
- Keep bystanders away
- Cover the victim with a blanket, jacket,...
- In case of electrocution; do not touch the victim! Turn off the power immediately!

What to do in case of a **fire**:

- Keep your composure under all circumstances!
- Loudly shout " FIRE " !
- Always make sure where the fire-fighting equipment is located at the workplace. (see attachment 1.1) so that you can intervene immediately in the event of a fire!
- Immediately notify your supervisor and warn your colleagues!
- Try to extinguish the fire, but do not take any risks yourself!
- Any used or damaged appliances need to be replaced so always report the use of extinguishers to the foreman!!

What to do in case of an **evacuation**:

- Always follow the guidelines of the evacuation manager.
- Close windows and doors
- Switch off fire-hazardous electrical appliances (heating, air conditioning,...)
- Leave the building/ department in a calm, smooth manner.
- Make your way to the designated rendezvous-point and wait there for instructions.

1.5. Specific information about the workplace

A. General safety

The contractor who carries out work at MEGA, is responsible for compliance with all legal provisions of the CODEX, the AREI and VLAREM. The contractor or his personnel, who do not comply with the imposed safety regulations, may be denied access to the company's sites.

Wearing a helmet and safety shoes + fluorescent vest is mandatory at the concession and in the workshops. MEGA also implemented the chest lamps at this location in November 2021. It is important to wear these at all times in order to increase the visibility of the people on site.

Working on heights above 2 meters, should always be carried out according to the requirements of the Codex (Title 2, Book IV) Wearing an anti-fall belt is, among other things, mandatory for such works.

If damage is caused to the installations of MEGA, this must be reported immediately to the foreman.

The following equipment will be provided by MEGA: safety goggles, safety gloves and ear protective equipment. Working overalls and safety shoes are to be provided by your out-sourcing company. These working clothes have to comply with the ISO regulations (EN ISO 11612 / EN ISO 11611 / EN 1149-5) It is very important you have all the required PPE, and if you don't, you cannot start working and you will be asked to leave the workplace.

It is **prohibited**:

- a) To be under the influence of **alcohol or any other drug** or to take with you to work → We will not tolerate any use of alcohol and drugs! Please also note that if we suspect any abuse of alcohol in the workplace, we will have to undertake an alcohol test.
- b) To wear **loose-hanging clothing**
- c) To do maintenance of the machinery while they are in use
- d) To **remove the protective parts** of the machines, and it is obligated that you use them.
- e) To let unauthorized persons use the machines or to give access to unauthorized persons in the workshop.
- f) To use your cellphone in the workshop
- g) To have clothing, jackets lying around in the workshop! **A good housekeeping** of the workshop equals a safe work environment.
- h) To store food in the workshop! This has to be stored in the eating area.

B. Storage of gasses

Gasses are stored outside the workshop. Only experienced and **well – trained** personnel are allowed to handle gasses. It is **strictly forbidden to smoke** while handling gasses! When moving a gas cylinder, even for short distances, always **use a cart** that is suitable for the transportation of gas cylinders. The holders must be stored **vertically** and secured against falling (**chain**). It is important that you are aware of **the risks and dangers** of the gasses so read the information below carefully! Attention; Cylinders are never completely empty, may still contain **residual gasses**!

1) Acetylene

Acetylene (C_2H_2) is an extremely flammable gas. May cause asphyxiation in high concentrations. One can lose consciousness without being aware of the suffocation. Exposure of the gas cylinder to fire may cause the container to rupture or explode. All known extinguishing agents can be used. In the event of accidental release, evacuate the area, switch off ignition sources and ensure adequate ventilation.

Wear appropriate PPE at all times when cutting and welding. Smoking is strictly prohibited while using this product! Do not vent into sewers, basements, work pits or places where its accumulation could be dangerous or where there is a risk of an explosive mixture with air.

2) Oxygen

Oxygen (O_2) is a fuel-burning/oxidizing gas and can strongly promote combustion. Oxygen can react violently with combustible materials. Exposure of the gas cylinder to fire may cause the container to rupture or explode. All known extinguishing agents can be used.

While using this product, it is strictly forbidden to smoke and use open flames! Always wear the appropriate PPE! Do not vent into sewers, basements, work pits or places where its accumulation could be hazardous. Blow off only in very well ventilated areas.

! It is extremely important that these gases are stored correctly! Oxygen should be kept separate from other combustible gases and other combustible materials. Acetylene and Oxygen may therefore never be placed directly next to each other in the gas storage. Always keep two meters inbetween!

3) Sagox

Sagox ($Ar+CO_2$) is a gas mixture consisting of; carbon dioxide and argon. May cause asphyxiation in high concentrations. By losing consciousness, the victim is not aware of the suffocation. The container may explode if heated. Exposure to fire may cause the container to rupture or explode. Do not use a water jet for extinguishing, but use a water spray or mist. Always wear appropriate PPE.

Gas/vapor is heavier than air. May accumulate in confined spaces, especially in pits, basements, etc. Do not vent where accumulation could be hazardous.

4) Nitrogen

Nitrogen (N₂) is a non-flammable gas. May cause asphyxiation at high concentrations. Exposure to fire may cause the container to rupture or explode. All known extinguishing agents can be used. Do not vent into sewers, basements, work pits or places where its accumulation could be hazardous. Blow off only in very well ventilated areas.

5) Propane

Propane is a very flammable gas. Explosive air/vapor mixtures may form at ambient temperature. Inhalation of very high concentrations of vapor, even for short periods of time, may cause unconsciousness or be fatal. Cold burns may result from skin/eye contact with the liquid. These must be rinsed immediately with water!

Avoid open flames, sparks & mobile communication equipment in the area. Containers may explode if exposed to very high temperatures for extended periods of time.

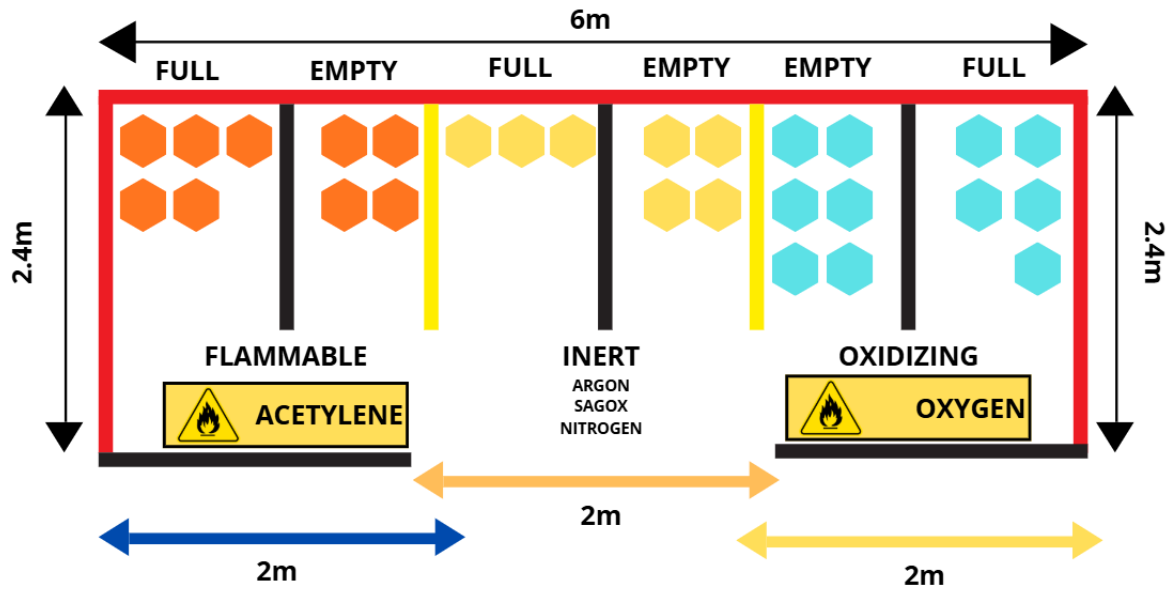

Since this product has a very low flash point, any spillage or leakage poses a serious fire and/or explosion hazard. If spilled (or leaked) material has failed to ignite, shut off gas supply, isolate ignition sources and evacuate personnel. Liquid leaks generate large amounts of flammable vapor, which is heavier than air. This vapor can travel great distances to reach distant ignition sources (eg along drainage systems) and linger in low-lying areas. Always wear the appropriate PPE!

6) Argon

Argon (Ar) is a non-flammable gas. Argon is one of the noble gases and is an inert gas. Argon therefore does not react to other substances and is not flammable, toxic or explosive. However, it does have an oxygen-displacing effect, which means that in high concentrations it can lead to suffocation. Exposure to fire may cause the container to rupture or explode. All known extinguishing agents can be used. Use of compressed air equipment is mandatory unless the atmosphere is proven to be safe. Do not vent into sewers, basements, work pits and places where its accumulation is dangerous.

More information about the storage and moving of gas cylinders can be found in attachment 5.8 & 5.9.

C. Tidyness in the workplace

It is important that you keep your **workplace tidy** while working. An untidy workplace leads to dangerous situations; just think of a tripping hazard due to cables, work trays, etc...

Materials may not be placed in front of corridors, doors, exits, rescue equipment, fire extinguishers,...

All waste must be regularly removed by a recognized waste disposal company.

Even after work, you must always leave the workplace tidy. All tools must be stored in the designated work bins. Work equipment such as ladders, trestles and scaffolds should always be neatly set aside. This is to prevent the ECH drivers/forklift drivers from having to make **unforeseen maneuvers**!

D. Procedures

It is important to always prioritize the safety and health of both yourself and that of your colleagues. You should therefore take the following into account:

- Immediately **report any dangerous situation** you notice to the health and safety officer!
- Immediately **report defects** of tools, ladders, racks, ...
- Always remain **attentive** during the work to be performed!
- **Cell phone use** is prohibited in the workplace
- Wearing **fluorescent clothing / chest lamp** is mandatory at the depot! (see instruction card "visibility on depot")
- Always make sure you use the provided equipment correctly: ladders, scaffolding, trestles! (see instruction cards in attachment)

E. Working on location (montage)

When you have to work on location, the same rules apply.

The foreman assistant will prepare everything for the montage. He will make sure to provide the right tools and the correct PBM's that are needed for the job.

He will make a checklist and after returning from the location, he will check to see if everything was returned properly (nothing missing and no damages)

In case there is an incident or accident while working on location, make sure to always know who to contact.

Contact persons for working on location:

Hubert: 0032492 39 48 87

Tommy: 0032468 26 30 01

F. Toolbox

Every person in the workshop will be given a toolbox. It is very important that you keep this toolbox tidy and clean. The toolbox is not a place to store clothes, food or personal belongings!

When leaving the workshop, always make sure to lock your toolbox. You will be held responsible for any tools that went missing. Every week, an appointed person in the workshop will check all the toolboxes to see if they are kept tidy and clean and also to check if all the tools are still in place.

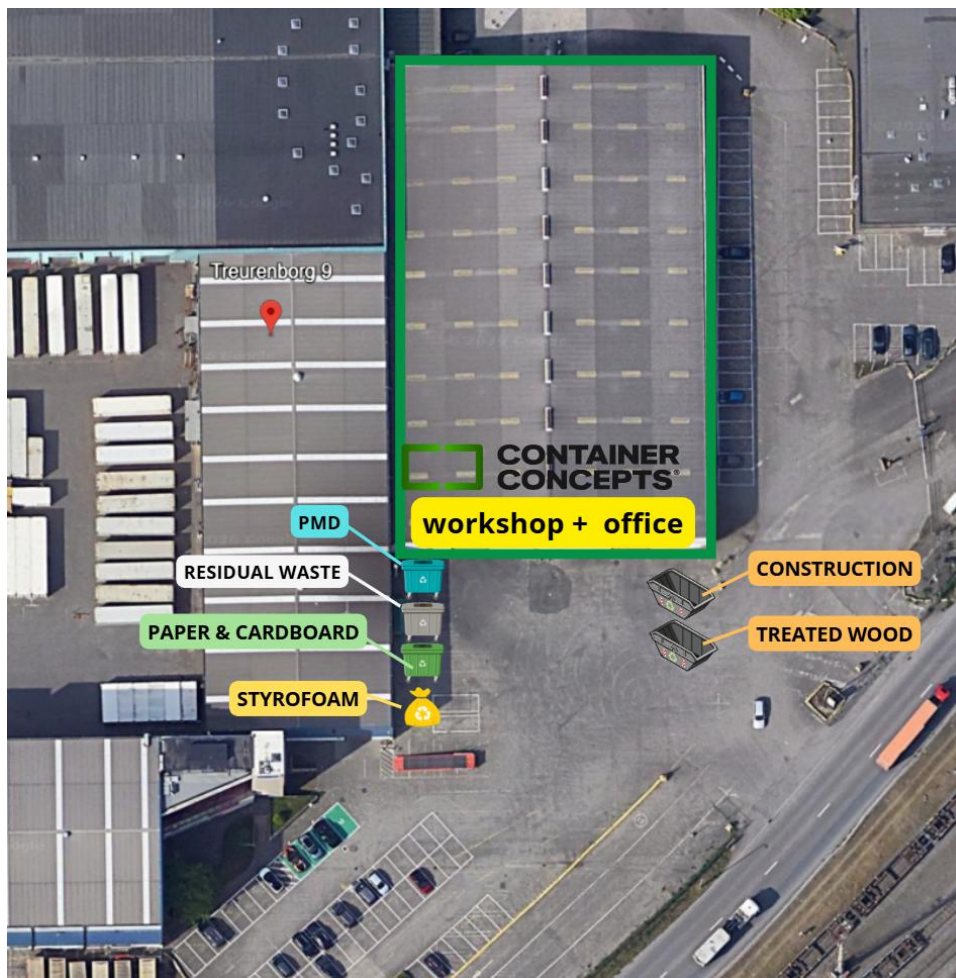

Please report every damage of the tools immediately to the foremen, **do not try to fix them yourselves!**

G. Waste disposal and environmental awareness

In and outside the workshop, there are several waste containers. Ask your foreman about the regulations regarding the sorting of waste and follow these rules. → see overview waste below

It is prohibited to burn any waste. Dangerous waste needs to be stored separately and collected by an approved company.

Make sure to always clean your workplace. When working on location, the same rules apply.

H.ISPS rules & awareness

ISPS stands for **International Ship & Port Facility Security Code**.

Within our organization, we attach great importance to a safe port and working environment. Therefore, we expect all employees to understand the ISPS regulations and to report any abnormalities or incidents correctly and immediately to the PFSOs.

Within the Eucore – Mega – Thornton group, five Port Facility Security Officers have been appointed. They are responsible for carrying out inspections and patrols, creating awareness, conducting exercises, and following up on incidents.

The detailed practical guidelines and procedures can be found in Annex : ISPS Awareness.

2. War on drugs – Port of Antwerp

The port of Antwerp is a major logistics player in international trade. It is centrally located within Europe, and has connections worldwide. Unfortunately, in addition to ordinary traders, criminal organizations also find their way to our port. Unfortunately, its location, size and sensitive connections with South America, make it attractive for the international drug trade.

The drugs are smuggled into the port between different types of goods. To help them do this, drug criminals look for accomplices in every link of the logistics chain. Whether you are a dock worker, clerk, manager or technician: you can also be approached. It is important that you are alert to this and react in the right way.

Want to earn extra money quickly?

Drug criminals are constantly looking for new accomplices within the entire port community through various channels. Have you been approached? Be alert for suspicious questions, and don't be tempted: there is no turning back. Say no to drug trafficking.

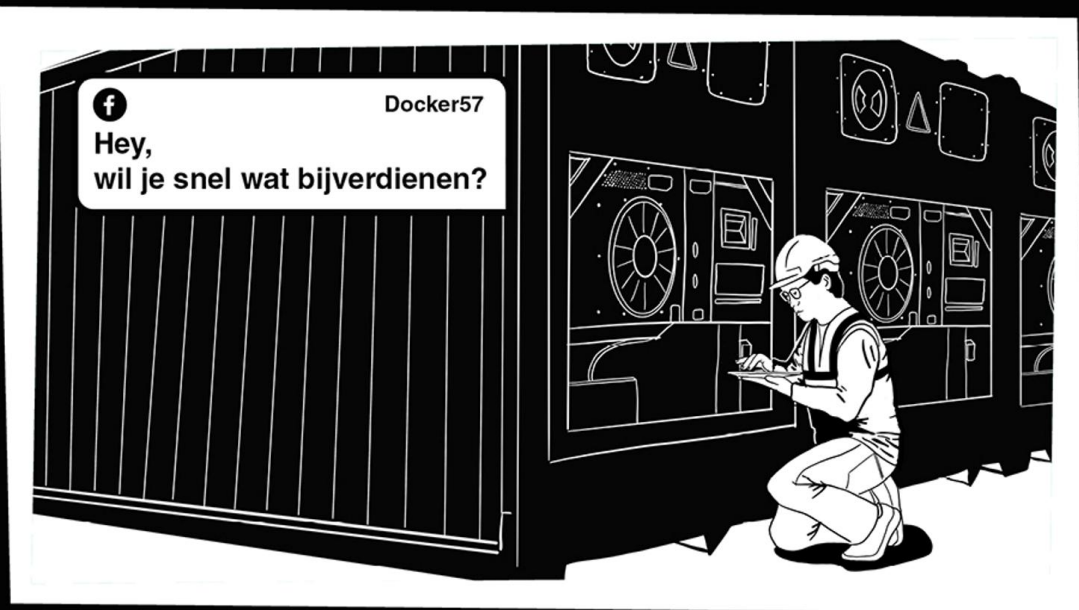

How do they contact you?

Drug criminals seek contact in person (e.g. at festivals, in the fitness, in harbor restaurants...) and through social media (via Snapchat, LinkedIn, Facebook...). They often don't come across as 'suspicious'. Online they usually use fake profiles. They try to seduce you by offering large sums of money, they ask you questions about your job in the port...

How do you react?

Answer short: "No, not interested." Do not enter into the conversation and never meet. Participation in drug trafficking always ends badly. So don't be tempted.

Notice anything suspicious? Report it anonymously via www.onzehavendrugsvrij.be or 03 236 62 25. If you are contacted online, take a screenshot which you can upload via the online reporting point. Please also report any suspicious fact that you notice to the health and safety officer.

LAAT JE NIET VERLEIDEN

Zeg nee tegen drugshandel: er is geen weg terug.

3. Contacts

Foreman **MEGA 3** : Ben Boogaard – 0032 472 55 89 05
Foreman **CONCEPTS**: Hubert Zajac - 0048 731 547 815
Foreman **LB** : Aneta Mokijewska – 0032 485 97 21 24
Safety advisors: Emily Meers – 0032 489 11 33 37
Joyce Van Geffen – 0032 492 11 24 47

4. Attachments

- 5.1 Overview PPE's: gloves
- 5.2 Safety instruction card Ladder
- 5.3 Safety instruction card Ladder with handrail
- 5.4 Safety instruction card Visibility on the depot
- 5.5 Safety instruction card Storage of gasses
- 5.6 Safety instruction card Transportation of gasses
- 5.7 Safety instruction card Autogenous welding
- 5.8 Evacuation of Container Concepts
- 5.9 ISPS Awareness

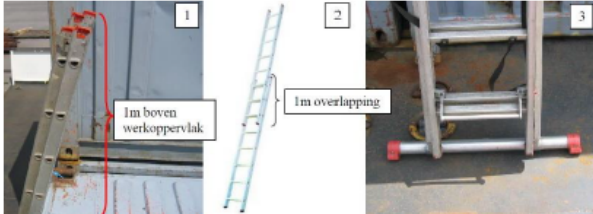

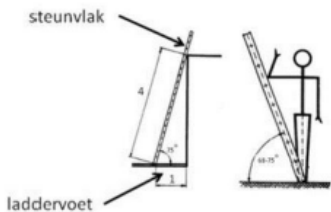

4.1 Overview PPE's: gloves

				
1	2	3	4	5
1 WELDING GLOVES: USED FOR CONTINUOUS WELDING AND REAL COURSE WORK LIKE TEARING PANELS FROM THE FOAM				
2 DRIVER GLOVES: STRONG GLOVES TO OFFER MORE PROTECTION, ALSO USED DURING SMALL BURSTS OF WELDING				
3 TROPIC GLOVES: THIS IS A MULTIPURPOSE GLOVE USED, GIVES SOME PROTECTION BUT NOT ENOUGH DURING COURSE WORK				
4 GUIDE RUBBER GLOVES: USED FOR MORE DELICATE WORK WHERE MORE FEELING IS REQUIRED (REFRIGERATED MECHANICS)				
5 NITRILE GLOVES: A BASIC THROW-AWAY GLOVE USED DURING WORK WHICH CREATES INSTANT SPILL LIKE WORKING WITH OILY SURFACES AND FOAM				

 CONTAINER CONCEPTS
A MEGA COMPANY

4.2 Safety instruction card ladder

SAFETY INSTRUCTION CARD LADDER

RISKS	• Sliding or tilting of ladder sideways • Falling from ladder	
Safe work instructions	• Before the start of the works: - Only use ladders for occasional and short-term work, which can be carried out with one hand, do not require great strength and where no heavy loads have to be carried (max 10 kg) - Choose an adapted ladder according to the task to be performed: - Length at least 1 meter above the workplace or access level - At least 1 meter overlap with sliding ladders - Do not use metal ladders near electrical lines - Use a ladder with non-slip feet and preferably with wide feet  - Check the ladder: *Damage to the ladder (cracks, deformation, unevenness) *Damage and attachment of rungs *Condition of the non-slip feet *Cleanliness of the rungs - Do not use ladder if it has any of the above defects! • Straighten up - Provide a firm and level surface - Get help straightening heavy ladders - Place the ladder at the correct angle of inclination (68-75°): - The ratio of the ladder foot to the support surface should be approximately 1/4 of the length of the ladder. 	

Safe workinstructions	• Make sure that the ladder is stable at the top: - Secure the ladder against falling over (hooks, rope..) – Mandatory for ladders of +25 rungs - Never let the ladder rest on one rung, beam or on a fragile element (eg window) • Climbing, descending and working on the ladder: -Demarcate the work area if there is a risk of collision or overturning of the ladder. (Eg: cones or flag/hook system!) - Climb and descend by facing the ladder and holding both hands on the beams. - Never climb higher than the fourth highest rung. -Maximum height ladder: standing height may be a maximum of 7.5 meters. -Carry tools and or equipment upwards in a bag or on a belt - Lift too heavy or too large material with an aid (rope, forklift...) - Use one hand to do the job and the other to hold onto the ladder - Don't reach more than one arm's length outside the beams, but move the ladder - Never work with one foot on the ladder and the other foot on a support point next to the ladder!	
After use	• Clean the ladder if necessary, especially if the rungs are soiled by oil, grease, mud, etc. • Store the ladder in the designated place • Do not hang anything on the ladder when it is stored • Remove a ladder if it has defaults/	
Attention points	• Before the start of the works, determine whether the ladder is most suitable for the job • Only use ladders that are in good condition • Make sure that the ladder never rests against a fragile element • Make sure that the ladder is never supported by one rung or one beam • Never climb higher than the fourth highest rung • Never enter the ladder with more than one person at a time • Never work with one foot on the ladder and the other on a support point next to the ladder    	

THINK SAFE, WORK SAFE!!!

4.3 Safety instruction card small ladder with handrail

SAFETY INSTRUCTION CARD FOLDING STEPLADDER WITH HANDRAIL		
RISKS	• Tripping/ overturning of the ladder • Falling from the ladder • Slipping on the ladder • Loss of balance	
BEFORE USE	• Before starting work: - Look around you: check whether the work area is safe. Is the workplace tidy? → first tidy up the area before unfolding the ladder. - Unfolding the ladder: take the time to set it up safely. Consider the following: ◦ Always open the two sections of the ladder fully ◦ Push the spreader bars fully down - Inspect the ladder regularly and report any problems/damages to the supervisor. Check carefully for defects in the feet and rungs! Consider the following: ◦ Rungs with anti-slip profile? ◦ Anti-slip feet on the ladder? ◦ Stability and construction (hinges). ◦ Does the ladder have a proper handhold and spreader lock? ◦ Any other visible effects? - Prevent tripping/overturning: take the time for a safe setup. Consider the following: ◦ Take the floor condition into account (uneven, slippery, wet) ◦ Ensure adequate lighting ◦ Avoid setups near edges → Ask yourself whether you are physically/mentally fit to carry out the work on a ladder.	
DURING USE	- Climbing, descending and working on the ladder: ◦ Wear safety shoes with slip-resistant soles! ◦ Do not wear loose-hanging clothing! ◦ Protect the work zone if there is a risk of collision with or knocking over the ladder (cones / flag) ◦ Carry tools and/or materials up in a bag or on a tool belt! ◦ Never work with one foot on the ladder and the other foot on a support point next to the ladder.	
AFTER USE	• Clean the ladder if necessary, if the rungs are soiled with oil, grease, mud... • Store the ladder in the designated place • Do not hang anything on the ladder while it is stored • Remove any ladder that shows defects.	

Key Points	• Use only ladders that are in good condition • Make sure the ladder never rests against a fragile element (window) • Make sure the ladder never bears on a single rung • Never have more than one person on the ladder at the same time • Never work with one foot on the ladder and the other on a support point next to the ladder.	
-------------------	--	--

THINK SAFE, WORK SAFE!!!!

4.4 Safety instruction card Visibility on the depot

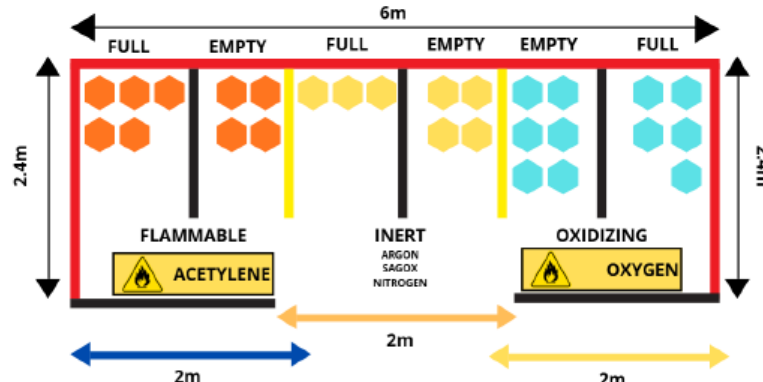

SAFETY INSTRUCTION CARD VISIBILITY ON DEPOT

RISKS	• Collision Empty Container Handler / Forklift • Collision external suppliers • Collision external trucks
Safe work instructions	During the winter months it is still dark outside in the morning and in the evening it is dark earlier. To increase the visibility of pedestrians & cyclists at the depot, we would like to point out to everyone to always wear fluorescent clothing and to wear a chest lamp. This will significantly increase the visibility of all estimators, container repairers & foremen on the square. As a result, the risk of collision with forklift trucks, Empty Container Handlers, external suppliers and external trucks will also be significantly reduced. Please also always use the walking paths and never walk between the stacks! 

4.5 Safety instruction card Storage of gasses

SAFETY INSTRUCTION CARD STORAGE OF GASSES

	PRECAUTIONARY MEASURES	
INSTRUCTIONS	- Gas bottles are placed vertically and secured with chains or brackets to prevent falling - Gas bottles with gases with corresponding hazard properties are stored together - Natural ventilation must always be guaranteed - Heat and ignition sources are at a safe distance	
	 → Separating empty and full bottles and this has to be marked clearly	
Aandachtspunten	- Wear suitable gloves! - Always secure the bottle against falling over (by means of chain / handle) - Always put the protective cap on the bottle - Never place the bottles horizontally on the floor - Never roll bottles - Never throw or drop bottles - Do not expose the bottles to fire, sun or other heat sources - Do not move a bottle without head guard - Do not move more bottles than necessary for the work	

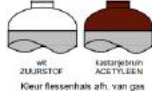

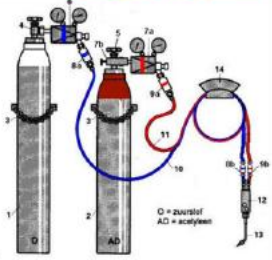

4.6 Safety instruction card Transportation of gasses

SAFETY INSTRUCTION CARD TRANSPORT OF GASES

	PRECAUTIONARY MEASURES	
RISKS	• Bottle falling over • Pinching of hands and feet • Fire and explosion	
Instructions  	1) Always transport gas bottles with an adapted means of transport (no closed car) where: - Bottles can be secured - The bottles are upright or at an angle greater than 30°n with the head up 2) A gas cylinder may be moved a short distance by rolling it slightly tilted 3) Always hold the head or, for larger bottles, rest the head on your shoulder 4) Always keep a sufficient distance between the gas bottle and other materials or construction so that you cannot pinch your fingers 5) Bring the means of transport as close as possible to the gas bottle 6) Always secure a gas bottle immediately against falling 7) Always close the gas storage area correctly when leaving 8) Empty bottles should be returned to the gas storage facility at the designated location 9) If the bottles are exposed to sunlight or other heat sources for a long time during transport, they must be shielded.	   
Aandachtspunten	• Wear suitable gloves! • Always secure the bottle against falling over (by means of chain/handle) • Always put the protective cap on the bottle • Never lay bottles flat • Never roll bottles • Never throw or drop bottles • Do not expose the bottles to fire, sun or heat sources • Do not move a bottle without head guard • Do not move more bottles than necessary for the work	

	- Fully close the cylinder valve - Move the cylinder outside as quickly as possible - Cool the cylinder thoroughly with cold water - Notify the responsible person and call the fire brigade (112)    1. Zuurstoffles 2. Acetyleenfles 3. Omvalbeveiliging 4. Kraan op de zuurstof fles 5. Kraan op de acetyleenfles 6. *Reduceerventiel voor zuurstof 7. *a) Reduceerventiel voor acetyleen b) Beugel voor reduceerventiel van de acetyleenfles 8. a) Terugslagklep/vlamdover voor de zuurstofleiding direct na het reduceerventiel geplaatst b) Terugslagklep/vlamdover voor de zuurstofleiding direct t.h.v. de brander geplaatst 9. a) Terugslagklep/vlamdover voor de acetyleenleiding direct na het reduceerventiel geplaatst b) Terugslagklep/vlamdover voor de acetyleenleiding direct t.h.v. de brander geplaatst 10. blauwe dikwandige zuurstof leiding 11. rode acetyleen leiding 12. brander met regelkranen voor zuurstof en acetyleen 13. mondstuk 14. houder voor opgerolde leidingen O = zuurstof AC = acetyleen * niet van toepassing indien de fles voorzien van een geïntegreerde reduceerventiel	
Safety points	- Transport and position the gas cylinders correctly - Ensure that the gas cylinders are always securely fastened - Check the condition of your welding clothing → report any defects immediately to your supervisor - Never weld in a fire-hazardous environment - Position the workpiece securely and protect it against falling - Place the ground clamp as close as possible to the welding point - Set the correct current for the material being welded - Regularly monitor the surrounding area - Clean up after welding and leave the work area tidy	

THINK SAFE, WORK SAFE!!!!

4.8 Evacuation Container Concepts

ISPS AWARENESS

WHAT IS ISPS?

ISPS = International Ship & Port Facility Security Code

This regulation protects against:

- Drug smuggling
- Unauthorized access
- Theft & espionage
- Sabotage & terrorism

WHAT SHOULD YOU STAY ALERT FOR?

- Unauthorized persons
- Suspicious behaviour
- Holes in the fencing
- Unattended vehicles
- Unattended bags
- Taking photos or videos
- Containers placed in illogical locations

UNAUTHORISED PERSONS - WHAT SHOULD YOU DO?

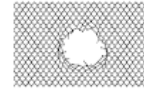

1. Approach safely
2. Ask for identification
3. Contact the PFSO
4. Stop working
5. Escort them to exit

DRUG SMUGGLING - BE ALERT FOR:

- Open container doors in stack
- Loose or hanging panels
- Containers in the wrong location
- Containers placed too close to the fence
- Containers moved without a record in Box-e

ABNORMALITIES

- Hole in the fence
→ do not repair it → report to the PFSO + take photo
- Unattended object (backpack/bag)
→ Do not touch → Clear the area + inform the PFSO
- Unattended vehicle
→ Take a photo + license plate & report to the PFSO

IN CASE OF A SECURITY INCIDENT:

1. Stop the activity
2. Immediately report it to the PFSO
3. Gather information without taking any risks
4. Secure the area
5. Follow the instructions of the PFSO / port police

PFSO - SECURITY POINT OF CONTACT

The PFSO's are responsible for:

- Inspections & patrol rounds
- Awareness trainings
- Incident follow-up
- Contact with port authorities

Emily M.

Shayne V.

Joy D.

Jan S.

Gert S.

WELCOMING BROCHURE

Miss/Mister....., acting as authorized representative of MEGA /
CONTAINER CONCEPTS– Treurenborg 9, 2030 Antwerp.

Declares that on.....(date of providing information) all the necessary information and instructions regarding the **well-being at work** and in accordance with the Belgian rules concerning **the welcoming and guidance of new employees** were provided to the new out-sourced employee.

Furthermore, it is declared that on (date of employment) the new out-sourced employee : Miss/Mister....., living in.....was assigned to an experienced employee (temporary or permanent)(name), who will provide further guidance and supervision during the employment.

Declaration done in Antwerp on.....

Signatures
